

TRIOMED CGI - THE HARMONIZER

TRIOMED CGI-3 CELULAR TUNING

Triomed CGI is a tuning fork for cell membranes
Upon impact on the body membrane potential and
cell functions are significantly improving

TRIOMED CGI-3 PROGRAMS

Program 1
“Harmony”
30 min
Apply directly on
the body
Distant stimulation
possible

Program 2
”Regulatory”
10 min

Program 3
“Recovery”
15 min

TRIOMED CGI PROGRAM “HARMONY”

The maximum stimulation per each 24-hour period is 30-120 min

The program is designed to stimulate the whole EIS of a person

The device can be worn on a strap or string around the neck

It can be also placed at a distance of 50 cm from the body

The radiation generated by the built in Si-Ge crystals, structures the water molecules present in the air

The restructured water molecules start “re-radiating” creating the all-around effects which are maintained even after the device was switched off

The surrounding space is now cleaned from electromagnetic smog and that is why MMW (millimeter wave) radiation is so vitally important for all biological objects (people, animals, plants).

TRIOMED CGI PROGRAM “REGULATION”

The maximum stimulation period is 10-15 min twice per day for 10-15 days

This program works with the main energy centers, energy channels or directly on the body zones where main health issues are located

The program is indicated to be used in cases of fatigue, increased irritability, overexertion, psycho-emotional stress, sleep disorders and mood decline/depression

This program promotes an adequate reaction of the organism to stressors

It optimizes all stages of regulatory reactions to the aggressive stressors

To activate the stress-busting effects, it is recommended to use the device to stimulate the projection of the chakras on the arms in the area of the wrist, the center of the palm of the left hand (left handed should use their right hand palm) and on the head - in the tragus of the ear

Use for stimulation slow circular motions

TRIOMED CGI PROGRAM “RECOVERY”

The maximum stimulation period is 15 min

Start the device and bring the little window of the device to the selected area, then start the program

The device can be left in the chosen area for some time, even after you switched it off

The information signal of the Si-Ge crystal helps EIS to recognize the health problem automatically and to trigger the appropriate body reactions aimed at solving the issues

The impact on the body's problem area with the “Recovery” program leads to a rapid recovery and normalization of the health impairments

The worse the body's condition (i.e. abrasions, burns bleedings), the more preferably is to use the program “Recovery” since this accelerates the regeneration of damaged tissue

TRIOMED CGI-3 BENEFITS

Thanks to improved quality of cellular membranes (potential and permeability), is facilitated a better cells absorbtion of nutrients and oxygen

A better quality of cell membrane, enables a better cellular waste disposal

Thanks to improved cell membrane, cell receptors' sensitivity is increased and this leads to a better:

- Cellular communication
- Communication between cells and the brain
- Absorbtion of hormones and neurotransmitters

TRIOMED CGI-3 BENEFITS

1. Thanks to improved cell membranes, there is an improved absorption of nutrients and oxygen
2. Thanks to improved cell membranes, there is a more efficient disposal of cellular waste
3. Thanks to improved cell membranes, and to an optimization of cellular potential, the cell receptors' sensitivity is increased and thus:
 - 3.1. Communication between cells is improved
 - 3.2. Communication between cells and the brain is improved
 - 3.3. Cells can easier absorb hormones and neurotransmitters

TRIOMED CGI-3 BENEFITS

Above all, Triomed treatments strengthen the cells of the nervous system, making Triomed one of the most effective therapeutic tools for balancing the nervous system

TRIOMED CGI IMPRINT WATER & REMEDIES

Imprint healing information on your water

TRIOMED CGI CLINICAL STUDIES

Normalization of lipid metabolism indicators

Normalization of immune system

Normalization of oxidants and anti-oxidant ratio

Activation of cell regeneration (increase in proliferation of fibroblasts)

Normalization of the bioelectric brain activity

Activation of hematopoiesis in red bone marrow

Improvement of rheological blood properties, such as lowering of blood viscosity,

Increase erythrocytes deformation

Balance of coagulant and anti-coagulative factors

Balance of ANS with stabilization of sympathetic and suppression of parasympathetic ratio

TRIOMED CGI CLINICAL STUDIES

Normalization of catecholamine and sexual hormones secretion

Suppression of influenza virus reproduction inside the cells and viricide effect

Rehabilitation of mononuclear ability to secrete γ -interferon, which enables the decrease in possibility of cancer development for risk group patients

Anti-inflammatory and analgesic effect

Inhibition of skin, liver, and brain aging processes
